THE EXPERTS IN LYOPHILIZATION (Cake Form Parenterals)

Lyophilization - freeze-drying - is a crucial enabling process technology for many important parenteral drugs. Close to 60 percent of biopharmaceuticals, including enzymes, proteins, hormones and monoclonal antibodies, must be lyophilized as these therapeutic agents are insufficiently stable for ready-to-use solution dosage forms.

In solution, many drug substances are susceptible to even modest changes in temperature and chemical environment. These complex molecules undergo hydrolytic, oxidative, and aggregation reactions, compromising both potency and safety. Consequently, parenterals must often be distributed "cold-chained" - refrigerated or maintained frozen from manufacturing line to patient. Even then, freezing and/or thawing may cause some proteins to aggregate. Lyophilization overcomes poor stability by rendering labile drugs and proteins in a solid form more tolerant of long term product storage.

Lyophilization extends the shelf life of drugs and biologicals, preserving their chemical and biological properties. It involves less cumbersome storage and handling. Lyophilization reduces the temperature requirement for shipping and protects the biological vitality. Compared with other methods, lyophilization dries biologicals at a lower temperature, reducing the damage to the product and retaining the molecular integrity.

Health Biotech Limited (HBL) provides world-class expertise in lyophilization product and process development, and prides itself on consistent delivery of parenteral products as economically and rapidly as possible.

Lyophilization is a costly, complex, facility-intensive operation that many companies do, but few do well. Health Biotech employs scientists rigorously trained in lyophilization science, making us ideally equipped to achieve excellence. Lyophilization process validation at Health Biotech not only includes assurance of meeting all physical and chemical requirements of the lyophilized dosage form, but also includes the maintenance of sterility in transferring product and during the freeze-drying cycle itself. With so many competencies for developing, manufacturing and validating robust lyophilized products, HBL's Contract Manufacturing Services (CMS) have become the avenue of choice for many marketers, both large and small, with developmental, clinical and commercial-stage lyophilization products.

ADVANTAGES OF LYOPHILIZATION

- Product is stored in dry state without stability problems
- Product is dried without elevated temperatures
- It is good for oxygen and air sensitive drugs
- Rapid reconstitution
- Constituents of dried drugs are homogeneously dispersed
- Sterility of the product can be achieved and maintained
